

Cell Phone Radiation

BioPro -

Cell Phone Radiation Reduction Technology

Do you spend a lot of time on your cell phone? Or do you have children or grandchildren who do? Cell phone technology is both a blessing and a curse. We can talk to virtually anyone, anywhere, which is a great convenience, AND we're just beginning to learn of the far-reaching damaging effects they have upon us – even the affecting of our DNA.

As a public service Integrated HealthCare is now carrying chips that will stick right on your cell phone, PDA, or Bluetooth device, which will greatly reduce, and possibly even eliminate the damaging effects of cell phones. Ask about them next time you're in, or come in just to pick one up. They're worth it!

Briefly, here are some specifics:

Electromagnetic frequencies are a naturally occurring event. However, in nature, EMF's are random/sporadic. Man-made EMF's, such as those emitted from cell phones, are constant causing a steady assault on the body. Brain tumors have increased some 20% since cell phone use began. The radiation emitted by cell phones actually penetrates the boney structure of the skull. Particularly at risk are our children who have a more porous bone structure and an undeveloped nervous system. It has been determined that children under 12 should not use a cell phone at all; children under 5 are at grave risk.

To hear from an expert, watch the video of Dr. George Carlo, founder of the Science and Public Policy Institute based in Washington, DC, and head of the Safe Wireless Initiative which was formed to educate the public about the dangers of electromagnetic radiation (EMR).

See the video [here](#). It's about 30 minutes long.

This is his presentation before the Irish Doctors Environmental Association (IDEA) in Dublin, Ireland (Feb 2007), in which he presents the latest findings that reveal how the information-carrying radio waves from cell phones and other wireless technology are causing biological harm.

Dr. Carlo is the former chief scientist of the wireless industry's multi-million dollar research project into cell phone safety, which ultimately revealed findings at odds with the industry's interests.

Bio-Pro radiation reduction chips for your phones and other electronic devices are available at the clinic.
